PROFESSIONAL SUMMARY

Forward-thinking Software & AI Automation Engineer with 2+ years of experience specializing in Frontend Architecture, Backend Infrastructure, and AI-first development. Proven track record of leading engineering teams, building scalable full-stack applications, and implementing intelligent workflow automation. Adept at bridging the gap between rigorous engineering principles and modern digital solutions to drive product growth and user engagement.

CORE SKILLS & EXPERTISE

Frontend Architecture: React.js, Next.js, React Native, TypeScript, JavaScript (ES6+), Tailwind CSS, Bootstrap, HTML5/CSS3, State Management (Redux, Zustand, Context API)

Backend & Infrastructure: Node.js, RESTful API Design, Database Management, Server-side Logic, GraphQL

AI & Workflow Automation: n8n Workflow Automation, Prompt Engineering, Conversational AI Integration, AI-Assisted Development

Leadership & Methodology: Engineering Team Management, Agile/Scrum, UI/UX Implementation, Cross-Browser Optimization

PROFESSIONAL EXPERIENCE

Lyndron-X – Founder & Lead Developer

Jan 2026 – Present

- Spearheaded the technical architecture, backend infrastructure, and product development for Lyndron-X platforms.
- Directed the design and launch of Menteax ([menteax.com.ng](#)), a high-fidelity mental wellness platform integrating Conversational AI to provide responsive, intelligent user interactions.
- Engineered and optimized the Menteax launch strategy, successfully securing 100+ registered waitlist signups.

Trueminds Innovations Ltd – Engineering Lead & Frontend Intern

Feb 2026 – Apr 2026

- Led and mentored a 7-person team of frontend engineering interns in architecting and building TalentFlow LMS, a scalable Learning Management System portal.
- Oversaw frontend and backend design alignment, established styling guidelines using Tailwind CSS, and ensured cross-browser compatibility across the platform.
- Developed and delivered a full-featured, responsive food-ordering web application (Chuks Kitchen) for a local business client, streamlining their digital vendor presence.

GDG LASUSTECH – Frontend Developer

2024 – Present

- Collaborate within an agile team environment to design and develop modern, responsive e-commerce web interfaces.
- Implement fluid, mobile-first responsive layouts using semantic HTML5, modern CSS frameworks, and JavaScript.
- Active participant in design sprints and technical discussions to translate UI/UX wireframes into performant production code.

Freelance / Independent – Software Engineer

2024 – Present

- Architecting the frontend for a multi-sided house rental service platform connecting tenants directly with verified agents, optimizing property search filters and inquiry workflows.
- Developing a cross-platform e-commerce mobile application focusing on high-volume product browsing, smooth cart interaction, and secure checkout architecture (upcoming launch).
- Designed and engineered a secure, high-performance portfolio platform for a Cybersecurity Engineer to showcase technical case studies.
- Developed an interactive vendor dashboard infrastructure for e-commerce platforms, utilizing dynamic state management to optimize data visualization.

TECHNICAL PROJECTS

PulseGrid – Emergency Healthcare Routing System

- Engineered an intelligent emergency response and routing system tailored for Lagos State to optimize ambulance dispatch and healthcare facility mapping with real-time geolocation dashboards.

CityConnect AI – Smart Infrastructure Digital Twin

- Designed and developed a digital twin simulation platform utilizing modern frontend frameworks to visualize urban resource management and real-time smart infrastructure parameters.

TalentFlow LMS – Learning Management System

- Led the frontend intern engineering team at Trueminds Innovations Ltd to architect and build a comprehensive Learning Management System.

Menteax – AI Mental Wellness Platform (menteax.com.ng)

- Architected an AI-powered wellness companion platform featuring conversational AI integration, responsive design, and automated user onboarding.

House Rental Service Platform – Tenant-Agent Housing Connect

- Engineering the frontend interface in a team setup to streamline communication and rental listings between tenants and estate agents.

Chuks Kitchen – Local Restaurant Web Application

- Built and deployed a responsive, high-converting food ordering and digital showcase web application for a local vendor.

GDG LASUSTECH E-Commerce Platform – E-Commerce Web Application

- Collaborated on building performant, mobile-first storefront layouts with product filtering and dynamic state management.

E-Commerce Mobile Application – Mobile App (In Development)

- Building a cross-platform mobile app designed for seamless e-commerce transactions, push notifications, and intuitive navigation.
